

Matrix High Performance

Special Features

Oil-Free Shredding

Wondering when your shredder was last oiled is no longer a concern with Dahle's oil-free, hassle-free shredders. Through clever engineering, these machines maintain peak performance without the aid of oil, and reduce the chance of a paper jam. Dahle Oil-Free Shredders are not only convenient to use and economical to maintain, but also easier on the environment.

Matrix High Performance

Oil free shredding is made possible by the hybrid Matrix High Performance (MHP) cutting cylinders. These cylinders feature aggressive cutting edges that are fused to a solid steel shaft. This creates an incredibly strong bond providing superior shredding capabilities.

Trident Grip Protection

The unique design of the cutting cylinders produces three continuous points of contact with the paper, pulling it straight through the cylinders. This smooth, even pull prevents the paper from becoming wedged to either side, and provides unprecedented jam protection.

SmartPower Energy Management

Dahle shredders operate using the intuitive SmartPower Energy Management System. This multi-stage system reduces power consumption after ten minutes of sitting idle (*sleep mode*), and completely powers down to a 0% energy draw after 20 minutes of inactivity. This makes Dahle the most energy efficient shredders on the market. The SmartPower System will appeal to those interested in conserving energy as well as reducing electrical costs.

German Engineered

Dahle Matrix High Performance Shredders are engineered in Germany by Dahle Bürotechnik GmbH using the latest technology and finest materials. Each component is manufactured and assembled with precision from over 85 years of experience. These shredders feature cutting cylinders that are guaranteed to last a lifetime. Other components such as rubber shocks, electronic sensors, and integrated safety features produce a quality machine and peace of mind in knowing your Dahle shredder will provide many years of trouble free operation.
